

Bushtit *Psaltirparus minimus*

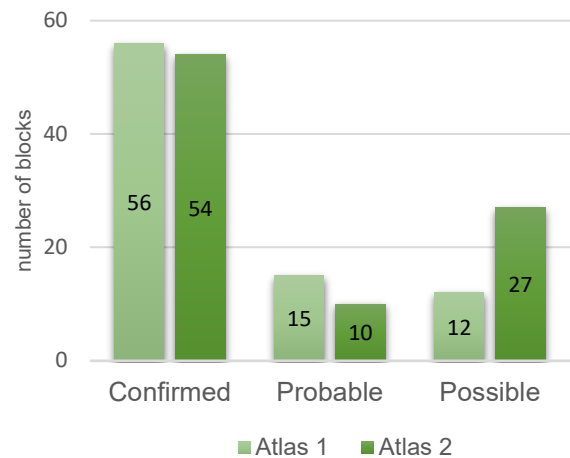

Atlas 1

Atlas 2

Comparison of Atlas Results

Whether building their sock-like hanging nest in a native oak or the camellia in front of your house, the Bushtit remains a common breeding species in urban and wooded portions of the county.

Breeding Bird Survey Trend (1966–2019)

California
0.61% / yearⁿ

Rangewide¹
–0.72% / yearⁿ

¹North America; ⁿnonsignificant; Source: Sauer et al. 2020

Breeding Habitat

Mixed woodland, including urbanized areas

Nest Type

Pendulous, gourd-like nest

16 April 2020

Block K-3

A first for me: one perched on the cap on my head, probably to grab one of many oak worms dropping from the trees.
