

# California Scrub-Jay

## *Aphelocoma californica*

Comparison of Atlas Results

Adaptable to urban settings, the California Scrub-Jay continues to be a common breeding species in the county, occupying nearly every habitat type except the treeless grasslands in the southeastern corner.

Breeding Habitat

Variety of open woodlands, including urban areas

Nest Type

Cup nest in tree or shrub

29 April 2017

Block #-5

Saw one with what looked like nesting material; turned out to be worms.
