

# Eurasian Collared-Dove *Streptopelia decaocto*

Present in every part of the county except pure grassland and the most densely urbanized zones, Eurasian Collared-Doves are certainly here to stay. However, there is some evidence from throughout their North American range that their numbers may have peaked, and they may even be in decline in some areas. More details were provided in Chapter Four.

### Breeding Bird Survey Trend (1966–2019)

California	Rangewide <sup>1</sup>
<b>19.99% / year<sup>s</sup></b>	<b>13.03% / year<sup>s</sup></b>

<sup>1</sup>North America; <sup>s</sup>significant; Source: Sauer et al. 2020

### Breeding Habitat

Near human development, suburban to rural areas

### Comparison of Atlas Results

### Nest Type

Stick nest in a tree or on ledge

23 April 2018

Block L-3

This trio seems to be resident here, with one pair and the third-man-out. Singing, courting, and defending observed.
