

Hooded Oriole

Icterus cucullatus

Comparison of Atlas Results

Further discussed in Chapter Five, the Hooded Oriole’s ability to exploit urban resources, such as sugar feeders and ornamental trees, fan palms (*Washingtonia* spp.) in particular, is reflected in the increase of breeding observations between the two atlases.

Breeding Bird Survey Trend (1966–2019)

California	Rangewide ¹
3.73% / year ^s	0.66% / year ⁿ

¹North America; ^ssignificant, ⁿnonsignificant; Source: Sauer et al. 2020

Breeding Habitat

Open woodland, especially with palms

Nest Type

Deep, woven cup nest

3 September 2020

Block K-3

Three fledglings all came down to the jelly feeder, followed by an adult female.

Might have to buy more grape jelly.
