

House Wren

Troglodytes aedon

A comparison of the maps for Atlas 1 and 2 suggests that the House Wren has expanded its range in Sacramento County. While breeding is still concentrated in the riparian habitats along the American and Cosumnes rivers, it appears that there may be more breeding in urban areas now than during Atlas 1. We also saw many more observations in the Delta during Atlas 2.

20 May 2017

Block #5

Saw both adults carrying food then heard nestlings after the female entered with a green worm; I checked the box with my camera and saw six small nestlings.
